The invention relates to a vacuum suction pen of a concentrating photovoltaic battery piece, and belongs to the technical field of solar power generation. The vacuum suction pen comprises a sucker, a gas channel pipe and a gas bag, wherein one end of the gas channel pipe is connected with the sucker, and the other end of the gas channel pipe is connected with the gas bag.

Vacuum Suction Pen dilengkapi dengan fitur ESD (ElectroStatic Discharge), tahan panas sampai 200 derajat. Berfungsi sebagai alternatif pengganti pinset untuk pengangkatan dan penempatan komponen SMD. Memiliki 3 ukuran ...

The utility model discloses a photovoltaic cell plate sucker. The sucker comprises a suction rod and an air pressure tube which is arranged in the suction rod and closed at two ends. A plurality of suction nozzles are evenly distributed on one side of the suction rod and communicate with the air pressure tube, which is connected to an air pressure regulator connected to an air valve.

In the photovoltaic industry, vacuum technology is normally used for handling solar cell or solar glass. The solar cell and solar glass are thin and fragile, very easy to be damaged during picking up and placing.

The utility model provides a vacuum suction pen used for a solar cell silicon wafer. The vacuum suction pen comprises a holding portion with a tube cavity and a sucker connected with the holding portion. The sucker is provided with a sucking hole. The sucking hole is communicated with the tube cavity. An end of the holding portion is provided with pressure discharge hole ...
