Integration of renewable and energy storage components in standalone/grid-connected energy systems, which results in hybrid energy systems, is increasing nowadays. ... application of multi-objective optimisation is preferred rather than a single-objective solution. By multi-objective optimisation, a trade-off among different objectives can be ...

Several aspects are involved in the transition of the ancestral electrical grid into a smart and green one. However, the main factors are renewable energy penetration, associated storage system, and energy generation cost. In view of developing a sustainable storage system and per unit energy cost reduction, this paper addresses the optimal sizing and techno ...

Finally, it highlights the proposed solution methodologies, including grid codes, advanced control strategies, energy storage systems, and renewable energy policies to combat the discussed challenges. The findings of this article assist the power system scholars and researchers in conducting further research in this field.

Notably, the realization of open-cast coal mines as a pumped storage system for grid-connected PV systems is purely novel. As open-cast coal mines are enormous craters, which are left idle once the coal is extracted, the idea of using the non-functional open-cast mine as PSHP will resolve many practical challenges.
