This chapter presents the important features of solar photovoltaic (PV) generation and an overview of electrical storage technologies. The basic unit of a solar PV generation system is a solar cell, which is a P-N junction diode. The power electronic converters used in solar systems are usually DC-DC converters and DC-AC converters. Either or both these converters may be ...

One characteristic of most hard energy proposals, in fact, is the emphasis on very large, expensive, centralized systems. For example, one would normally think of solar energy as a part of the soft energy path. But one proposal developed by the National Aeronautics and Space Administration (NASA) calls for a gigantic solar power station to be ...
