

Introducing BN in a cycloalkane is a newer way of producing hydrogen storage material. 1,2-BN cyclohexane [123] and methyl BN cyclopentane [123] are the examples. These BN containing organic hydrides have reasonably high gravimetric densities and show fast kinetics [124]. For example, 1,2-BN cyclohexane has 4.7 wt% hydrogen capacity and ...

Mg-based hydrogen storage alloys have a very high hydrogen storage capacity, with 7.6 and 3.6 wt% for MgH₂ and Mg₂NiH₄, respectively, corresponding to theoretical capacities of ~2200 and 999 mAh/g, respectively [135], [136], [137]. This is much higher than that of AB₅, AB₃, AB₂ and Ti-V-based hydrogen storage alloys. In addition, Mg is ...

Consequently, alternative storage technologies will be required and several efforts of the scientific community are directed towards solid-state hydrogen storage which involves solid-gas reactions described by the equation (1) [17]: $(1) \text{H}_2 (\text{g}) + \text{A} (\text{s}) \rightleftharpoons \text{A} \text{H}_2 (\text{s})$ In this context, several studies investigate the storage materials, including adsorbents, chemical ...
