What are the main problems with solar panels?

Among the core problems are safety-related issues that affect humans and infrastructures. People die, buildings collapse, and infrastructures get destroyed because there are fundamental flaws in the design and development of solar-enabled solutions for managing solar panels.

Why is solar intermittency a problem?

Solar intermittency is the most obvious issue related to PV panel efficiency. The sun is not visible for 24 hours per day except for a short time each year at extreme latitudes. Solar power users need other power sources to use after sunset, and utilities cannot rely on solar alone to provide electricity for their customers.
