Can a battery lifetime analysis and simulation tool improve demand charge management?

A previous study used the Battery Lifetime Analysis and Simulation Tool (BLAST) developed at the National Renewable Energy Laboratory (NREL) to consider optimizing the size and operation of an energy storage system providing demand charge management. Battery degradation and capital replacement costs were not considered.

Is battery energy storage a good investment?

Installation of a lithium-ion battery system in Los Angeles while using the automatic peak-shaving strategy yielded a positive NPV for most system sizes, illustrating that battery energy storage may prove valuable with specific utility rates, ideal dispatch control, long cycle life and favorable battery costs.

Is energy storage a profitable business model?

How much does a battery cost?

The cost of one battery was found to be about \$425, implying a price of \$255/kWh. This cost again assumes that installation and permitting are included, though additional analysis would need to be performed for a specific site. No efficiency was listed for the battery, so single point AC/DC and DC/AC conversion efficiencies of 92% were assumed.
