

Will BMW build a sixth-generation high-voltage battery plant?

The new facility will supply sixth-generation high-voltage batteries to German car plants. The BMW Group was granted permission to build the new high-voltage battery assembly plant in April 2024 and erected the first of more than 1,000 concrete pillars for the production hall in late June 2024.

What is 6th-generation BMW battery technology?

Sixth-generation BMW battery technology: New cell format and enhanced cell chemistry The battery cell is responsible for electric vehicles' core properties: range, driving performance and charging time.

Will BMW make a new generation of high-voltage batteries?

Think global - act local for local: Where the BMW Group will make its next generation of high-voltage batteries. The Neue Klasse will usher in a new era of fully electric driving at the BMW Group - the success of which will depend heavily on the production of powerful high-voltage batteries.

What is the difference between BMW 5th and 6th generation battery cells?

Compared to the prismatic cells of the fifth BMW battery cell generation, the nickel content of the sixth-generation BMW round cells will be higher on the cathode side, while the cobalt content will be reduced. On the anode side, the silicon content will be increased.

Will China make high-voltage car batteries?

Here, too, the sixth-generation high-voltage batteries required for the cars will be manufactured locally. The production hall was completed in November 2023, and the installation of plant and machinery has been underway since March 2024. The first Chinese-made pre-series batteries will roll off the production line at the end of this year.

Where are high-voltage batteries made?

State-of-the-art assembly plants for sixth-generation high-voltage batteries are currently under construction in Irlbach-Strasskirchen (Lower Bavaria), Debrecen (Hungary), Woodruff (near Plant Spartanburg in the US), Shenyang (China) and San Luis Potosí, Mexico.

Scheduled to debut in 2025, these vehicles will feature BMW's sixth-generation high-voltage batteries with improved energy density, charging times and range. The company is implementing a "local for local" strategy, ...

With an initial capacity of 30 GWh/a, the facility will produce the innovative cylindrical lithium-ion battery cells specifically developed for the sixth generation of BMW eDrive technology. Electricity for production of the ...

Plant Woodruff Will Supply Sixth Generation Batteries for Plant Spartanburg. By 2030, the BMW Group Will Build At Least Six Fully Electric Vehicles in the United States. Woodruff, S.C. - Construction of BMW's high ...

BMW's sixth-generation battery technology aims to change the game and we dive deep into the details behind the tech. ... and 60% less CO2 in production, the next-generation of battery ...

Here, too, the sixth-generation high-voltage batteries required for the cars will be manufactured locally. The production hall was completed in November 2023, and the ...

At its battery cell competence centres in Munich and Parsdorf, the BMW Group is systematically pursuing future milestones, such as the ramp-up of the sixth generation of BMW electric drive trains and development of all ...

Here, too, the sixth-generation high-voltage batteries required for the cars will be manufactured locally. The production hall was completed in November 2023 after a ...

In the future, the sixth-generation high-voltage batteries for the Neue Klasse will be manufactured in the approximately 150,000 square meter building. The assembly site in Lower Bavaria is making a significant ...

With the start of series production of the fifth-generation BMW battery at the High Voltage Battery Center II, it's clear that the first-ever BMW iX3 will arrive in the market ...

The BMW Group is expanding its production network for the next generation of high-voltage batteries significantly, with five facilities on three continents to produce sixth-generation high-voltage batteries.

BMW confirms it will establish assembly operations for a sixth generation (Gen6) electric-vehicle battery on the site of its new iFactory manufacturing plant under construction in Debrecen, Hungary.

"The battery assembly in San Luis Potosí will be part of our global production network. For our new sixth-generation e-drive alone, we are building five locations on three continents," explained Milan Nedeljkovic, ...

BMW will invest another 10 billion yuan (\$1.386 billion) to expand its high voltage battery production center located in Shenyang of Northeast China's Liaoning Province, likely to be the company's ...

BMW Group announces five new assembly sites across three continents for its sixth-generation high-voltage batteries, enhancing electric vehicle production. English Edition ??????

In line with its "local for local" principle, the BMW Group is locating its high-voltage battery assembly facilities worldwide as close as possible to its vehicle plants: Production facilities for the sixth-generation

BMW Group ...

The new BMW round cells come with a standard diameter of 46 millimetres and two different heights. Compared to the prismatic cells of the fifth BMW battery cell generation, the nickel content in the sixth-generation BMW ...
