

Although various materials have been applied as solar absorbers in solar cells, including Pb-perovskites, chalcogenides, organic materials, and quantum dots, Pb-perovskites are considered to be ...

The stabilization of the formamidinium lead iodide (FAPbI<sub>3</sub>) structure is pivotal for the development of efficient photovoltaic devices. Employing two-dimensional (2D) layers to passivate the three-dimensional (3D) perovskite is essential for maintaining the  $\gamma$ -phase of FAPbI<sub>3</sub> and enhancing the power conversion efficiency (PCE) of perovskite solar cells (PSCs).

Before designing strategies, it is necessary to revisit the fundamental factors that limit the theoretical ceiling. Considering the energy source in solar cells, the basic process from light to photon should be a crucial link in energy conversion [[10], [11], [12], [13]]. The principal energy loss in the conversion of solar energy into electricity fundamentally originates from the ...

Before reaching large-scale production and deployment of perovskite solar cells (PSCs), their entire lifecycle - from preparation and operation to discarding, needs to be carefully considered. In a recent study, researchers from Donghua University and Kyushu University used bio-derived chitin-based polymers to realize the full lifecycle regulation of air ...

Additive-assisted layer-by-layer (LBL) deposition affords interpenetrating fibril network active layer morphology with a bulk p-i-n feature and proper vertical segregation in organic solar ...

In a recent study, researchers from Donghua University and Kyushu University used bio-derived chitin-based polymers to realize the full lifecycle regulation of air-processed ...

Considering that radiative cooling requires efficient sunlight reflection, the integration of radiative cooling with solar cells poses a considerable challenge. To tackle this issue, Jia et al. design a transmission-type daytime radiative cooling system that successfully combines solar cell and radiative cooling technologies and significantly enhances energy ...

Perovskite solar cells (PSCs) have attracted tremendous attention as a promising alternative candidate for clean energy generation. Many attempts have been made with various deposition techniques ...

Thermal-induced self-degradation and recombination losses greatly impact the performance of inverted perovskite solar cells (PSCs). Herein, a multi-functional thermal management strategy based on ionic liquids (1-butyl ...

Celco Cell Process SAS is the first company who introduces high efficiency PERC process in mass

production. Stable performance in LID (Light Induced Degradation) and PID (Potential-Induced Degradation)

Air-Processed Efficient Perovskite Solar Cells With Full Lifecycle Management. Chuanming Tian, Chuanming Tian. State Key Laboratory for Modification of Chemical Fibers and Polymer Materials, College of Materials Science and Engineering, Donghua University, Shanghai, 201620 P. R. China ... accelerating the solid-liquid reaction and ...

In the pursuit of ecofriendly and cost-effective commercialization of perovskite solar cells (PSCs), efforts have been made to develop recycling technologies. Currently, most recycling processes use solvents that are toxic ...

Process management is an integral practice for any development engineer immersed in the complex and continually evolving domain of thin-film solar cell technology.

Buried interface management for FAPbI<sub>3</sub>-based perovskite solar cells via multifunctional ... widely acknowledged for its role in mitigating defects present on the surface of SnO<sub>2</sub> and regulating the crystallization process of ... Efficient perovskite solar cells via improved carrier management. Nature, 590 (2021), pp. 587-593. Crossref ...

23.2% efficient low band gap perovskite solar cells with cyanogen management+. W. Hashini K. Perera<sup>a</sup>, Thomas Webb<sup>b</sup>, Yuliang Xu<sup>c</sup>, Jingwei Zhu<sup>c</sup>, Yundong Zhou<sup>d</sup>, Gustavo F. Trindade<sup>d</sup>, Mateus G. Masteghin<sup>a</sup>, Steven P. Harvey<sup>e</sup>, Sandra Jenatsch<sup>f</sup>, Linjie Dai<sup>gh</sup>, Sanjayan Sathasivam<sup>ij</sup>, Thomas J. Macdonald<sup>k</sup>, Steven J. Hinder<sup>l</sup>, Yunlong Zhao<sup>dm</sup>, Samuel D. ...

Down converter SiN<sub>x</sub>:Yb<sup>3+</sup>/SiN<sub>x</sub>:Tb<sup>3+</sup> multilayers are deposited by reactive magnetron cosputtering with the objective of optimizing the interaction distance between Tb<sup>3+</sup> and Yb<sup>3+</sup> ions to favor a better light management in Si solar cells. Those Si-based multilayers are developed to be compatible with the Si photovoltaic technology. The deposition parameters are optimized to ...
