

How can a solar farm benefit Wiltshire?

Low intensity pastoral grazing to be used to manage grassland meadows in a natural and sustainable way. Minety solar farm would generate enough renewable power to generate the equivalent annual energy needs of around 15,000 homes, thus contributing towards the security of energy supply for Wiltshire. Our planned environmental improvements include:

What is a SolarEdge floating PV system?

A SolarEdge floating PV system maximizes power yield and facilitates maintenance to overcome access and environmental challenges of a floating solar installation, as demonstrated in the case study of Marlenique Estate in Taiwan. SolarEdge ground mount and floating PV were installed at this picturesque farm and wedding venue to protect against rising energy costs and load shedding.

How can solar farms help farmers?

By using some of their land to host solar farms, farmers can make their businesses more resilient against the impacts of climate change, which are already affecting crop yields and farm revenues. RWE contributes £2m annually to farm businesses through land rent payments, a figure set to grow.

Why should you choose SolarEdge 77mw solar project?

The SolarEdge 77MW PV project uses SolarEdge's large-scale commercial PV solution for superior safety features, maximum energy output, and lowest operating costs. This ground mount farm with bifacial panels and power optimizers reduces diesel reliance and creates local solar jobs.

Are solar farms a good idea for UK farmers?

Solar farms are essential for decarbonising the UK's power system and offer British farmers a valuable opportunity to diversify their income. By using some of their land to host solar farms, farmers can make their businesses more resilient against the impacts of climate change, which are already affecting crop yields and farm revenues.
