

What are the best solar filters?

The GOBE NDX Variable ND Lens Filter is one of the top rated solar filters available in the market. It is built using Japanese optical glass and features 8-layer nano-coating that allows this product to achieve neutral color balance, reduces lens flare, and removes ghosting.

What is a solar filter?

A solar filter is a type of camera filter specifically designed to allow you to view the sun by minimizing the intensity of the sun.

What is a Seymour solar filter?

This solar filter is made to thread into a threaded camera lens. The filtering material in the aperture of the filter is made with a polymer that is .002" thick. It is strong and durable. This filter features an aluminium cell with the Seymour Solar black polymer thin film. This is a great cheaper alternative to the glass ones.

What is a dual layer solar filter?

Dual layer design with our solar material on the outside to keep you cool and a black opaque inner liner to provide light blockage. These high quality filters are type 2 glass which means you will see an orange/yellow view of the sun. These filters are designed for observing sun spots.

What is a high quality sun filter?

These high quality filters are type 2 glass which means you will see an orange/yellow view of the sun. These filters are designed for observing sun spots. These high quality filters are type 2 glass which means you will see an orange/yellow view of the sun. These filters are designed for observing sun spots.

What is a sun spot filter?

These filters are designed for observing sun spots. These high quality filters are type 2 glass which means you will see an orange/yellow view of the sun. These filters are designed for observing sun spots. These high quality filters are type 2 glass which means you will see an orange/yellow view of the sun.
