

How is solar energy produced?

Solar energy is produced through a process called nuclear fusion that takes place in the sun. During this process, hydrogen atoms in the sun combine to form helium and in the process, energy is released. This energy travels to the earth in the form of light and heat and can be captured and converted into electricity using photovoltaic solar panels.

How does solar power work?

Solar power works by converting energy from the sun into power. There are two forms of energy generated from the sun for our use - electricity and heat. Both are generated through the use of solar panels, which range in size from residential rooftops to 'solar farms' stretching over acres of rural land. Is solar power a clean energy source?

What is solar photovoltaic (PV) power generation?

Solar photovoltaic (PV) power generation is the process of converting energy from the sun into electricity using solar panels. Solar panels, also called PV panels, are combined into arrays in a PV system. PV systems can also be installed in grid-connected or off-grid (stand-alone) configurations.

What is solar energy?

Solar energy is a renewable and sustainable form of power derived from the radiant energy of the sun. This energy is harnessed through various technologies, primarily through photovoltaic cells and solar thermal systems.

How does solar energy conversion work?

The initial step in the process of solar energy conversion involves the absorption of sunlight by the photovoltaic (PV) cells within a solar panel. These cells, constructed from semiconductor materials such as silicon, capture photons from sunlight. When these photons strike the PV cells, they excite electrons, thereby creating an electric current.

Where does solar energy come from?

The production of solar energy is a fascinating process that starts an astounding 93 million miles away, in the core of the sun. The energy produced is in the form of light and heat. It travels to us at the speed of light and arrives on our planet in just over eight minutes.
