

The latest international battery testing standards

What standards do we cover in our Battery Testing Laboratories?

We cover a wide range of lithium-ion battery testing standards in our battery testing laboratories. We are able to conduct battery tests for the United Nations requirements (UN 38.3) as well as several safety standards such as IEC 62133, IEC 62619 and UL 1642 and performance standards like IEC 61960-3.

What are the safety standards for battery transport?

In addition to UN 38.3, there are safety standards such as IEC 62133, IEC 62619 and UL 1642 as well as performance standards, for example IEC 61960-3. **WHY IS TESTING FOR BATTERY TRANSPORTATION IMPORTANT?** Lithium-ion batteries are now used across a vast range of battery-powered equipment.

What are battery test standards?

Battery test standards cover several categories like characterisation tests and safety tests. Within these sections a multitude of topics are found that are covered by many standards but not with the same test approach and conditions. Compare battery tests easily thanks to our comparative tables. Go to the tables about test conditions

What does certification to the IEC battery standard mean?

Certification to the IEC battery standard shows that a battery complies with the standard. There are many benefits to demonstrating that a battery complies with the IEC battery standard:

What are primary battery standards?

Primary Battery - standards IEC/EN60086-1, IEC/EN60086-2 are intended to standardise primary batteries with respect to dimensions, nomenclature, terminal configurations, markings, test methods, performance, safety and environmental aspects.

What are the different types of battery testing?

Compliant battery testing - Battery tests determined according to international standards include tests in the areas of environmental stress, electricity, mechanical stress, and performance/aging. A wide range of standards and test specifications define the type of tests that must be carried out on batteries.
