

The system does not recognize battery smart storage

What happens if the Smart Storage battery fails?

When the Smart Storage battery fails, the baremetal server does not respond. In addition, the following message is displayed in Integrated Management Log (IML). "POST Error: 312-HPE Smart Storage Battery 1 Failure - Communication with the battery failed. Its output may not be enabled. Action: Verify battery is properly installed.

Why is my dl380 Gen9 displaying a cache battery error?

I am working on a DL380 gen9 on a client's site and the cache battery is presenting the following error in iLO: Smart Storage Battery has exceeded the maximum amount of devices supported (Battery 1, service information: 0x07). Action: 1. Remove additional devices. 2. Consult server troubleshooting guide. 3. Gather AHS log and contact Support

Why does a smart battery charger not recognize a battery?

There are situations where a 'smart' battery charger won't recognize a battery because the battery is deeply discharged. Some chargers have a relatively high voltage threshold. Remember, a 12 volt battery (adjust numbers for 6 volt, etc.) is effectively discharged at 11.9 to 12 volts (fully charged is 12.72 volts).

Why is the cache disabled for smart array P440 in Slot 1?

"The cache for Smart Array P440 in Slot 1 has been disabled because the backup operation failed." "The operation failed. An unknown error occurred during execution" We already bought a complete new "HP Smart Array P440/4GB 12Gbps SAS Controller 749797-001 726815-002" and cache cable. Change these items but same problem.

Why is my smart array controller not working?

While you're at it, check the Smart Array controller itself. It could be the P440ar in these servers. If they have this model, then it's the mezzanine card towards the rear of the server in front of the riser cages. It had tons of firmware issues over its life cycle, resulting in unstable operation or even bricking the controller.

Do I need a new battery if I have a post error?

In many cases, array acceleration and some other critical features rely on that battery to function properly. If the POST errors are suggesting the battery be replaced, you should absolutely get a new battery. Please power off the hardware, remove power cables, wait... then power everything back on again. Watch the POST messages for any changes.

I'm getting the following message on "Smart Storage Administrator": "The cache for Smart Array P440 in Slot 1 has been disabled because the backup operation failed." and then when go to ...

The system does not recognize battery smart storage
