

What Is the Maximum Charging Current for a Lithium-Ion Battery? Lithium-ion batteries accept a maximum charge current of 1C or less, where 1C refers to the capacity of 1 times the current to the charge over 1 hour. However, some devices, like laptops, often have a maximum of 0.9C, and to extend lithium-ion battery lifespan, using 0.5C or less ...

Another option is the 26650 lithium-ion cell, which has a 5Ah capacity and requires only three cells to replace a lithium-polymer battery. Since a 4-cell LiFePO4 pack (12.8V) is farther from 11.1V than a 3-cell lithium-ion pack (11.1V), I chose the 26650 option. It also saved me cost as I only had to use three cells instead of four.
