What are the aspects of battery project management

The first generation of battery systems, termed "no management," is suitable for early battery energy storage systems focused solely on monitoring battery terminal voltage for charge and discharge control. However, this generation is characterized by a time-consuming maintenance process and suffers from low efficiency.

Presently, the global battery recycling capacity is >300 GW h, which will reach >1500 GW h by 2030 if all the announced projects materialize. ⁸² Although the battery recycling capacity is increasing worldwide, China is holding the top position with ~70% contribution. Noteworthy, the battery chemistry has a crucial impact on the battery recycling landscape.
