

## What equipment category does capacitor belong to

What are the different types of capacitors?

Capacitors are electronic devices that are used to retain electrical charges for some time. There are many different types of capacitors, but they can be broadly grouped into two main categories: popular types are fixed value capacitors and variable capacitors. Ceramic capacitors are made up of ceramic materials like the titanium dioxide.

What are the different types of ceramic capacitors?

Other types of ceramic capacitors include ceramic disk capacitors which are useful for high-frequency and high-voltage applications. Aluminium electrolytic capacitors are commonly used in applications where a large capacitance is desired.

What are the different types of film capacitors?

There are multiple types of film capacitors, including polyester film capacitors and polypropylene film capacitors. Polyester film capacitors are ideal for applications which require moderate precision, like timing circuits.

What is a capacitor used for?

The capacitor is an electrical device that is capable of storing electric charge. Capacitors have a broad range of applications in electronic circuits. They integrate parts, block DC while passing AC, separate wanted signals from interference, level the power supply, and set radios to the right frequency of interest.

What type of capacitor is used for filtering?

General applications such as non-critical filtering or coupling circuits employ E12 or E6. Electrolytic capacitors, which are often used for filtering and bypassing capacitors mostly have a tolerance range of  $\pm 20\%$  and need to conform to E6 (or E3) series values. Capacitance typically varies with temperature.

What are the different types of electrolytic capacitors?

Electrolytic capacitors for special applications include motor start capacitors, flashlight capacitors and audio frequency capacitors. Very large capacitance to volume ratio. Capacitance values up to 2,700,000  $\mu\text{F}$ /6.3 V. Voltage up to 550 V. Lowest cost per capacitance/voltage values.
