

# What procedures are required for industrial and commercial energy storage configuration

Who can install energy storage at a facility?

This could include building energy managers, facility managers, and property managers in a variety of sectors. A variety of incentives, metering capabilities, and financing options exist for installing energy storage at a facility, all of which can influence the financial feasibility of a storage project.

Are energy storage systems safe for commercial buildings?

For all of the technologies listed, as long as appropriate high voltage safety procedures are followed, energy storage systems can be a safe source of power in commercial buildings. For more information on specific technologies, please see the DOE/EPRI Electricity Storage Handbook available at: [TABLE 1. COMMON COMMERCIAL TECHNOLOGIES](#)

Where can energy storage be procured?

Energy storage can be procured directly from "upstream" technology providers, or from "downstream" integration and service companies (FIGURE 2) Error! Reference source not found.. Upstream companies provide the storage technology, power conversion system, thermal management system, and associated software.

Why is energy storage not suitable for all business types?

However, energy storage is not suitable for all business types or all regions due to variations in weather profiles, load profiles, electric rates, and local regulations. Procurement Options.

Who should oversee energy storage projects?

A qualified professional engineer or firm should always be contracted to oversee any energy storage project. This report was prepared as an account of work sponsored by an agency of the United States Government.

What are the different types of energy storage?

Energy storage comes in a variety of forms, including mechanical (e.g., pumped hydro), thermal (e.g., ice/water), and electrochemical (e.g., batteries). Recent advances in energy storage, particularly in batteries, have overcome previous size and economic barriers preventing wide-scale deployment in commercial buildings.
