

Where can I install solar panels?

Here are some great options for installing solar panels in places other than your roof. If you have a south-facing wall on your home with about eight feet by eight feet of space, you can install solar panel siding.

Where do solar panels go?

Rooftops are the most common places you'll see solar panels, but you have other options too. Installing solar panels can be a great leap toward electricity cost savings and energy efficiency. But the road to making it happen can be long and tricky. One problem you'll likely encounter: Just where will these panels go?

Which direction should solar panels be installed?

“Solar PV (photovoltaic) panels generate electricity from sunlight and will normally be installed on the roof of the building facing in the most south direction. The panels should also face as much south as possible. If you faced east, or west, then expect a yield of around 20% less generation annually” explains David Hilton.

Can solar panels be installed on a wall?

If your property is in a conservation area, or in a World Heritage Site, panels can't be fitted to a wall that faces onto the road. Standalone solar arrays - not fixed to a building but within the boundary of your property - can also qualify as permitted development, but they are subject to greater restrictions.

Can solar panels be installed on a roof?

“The solar panels will need to be mounted on the roof by installers who understand roofing and will need some scaffold decks to safely get the panels to the roof.

How do I plan a solar panel installation?

Choose a supplier and establish if the installation will fall under Permitted Development or if full planning permission is required 3. Make space for the solar panel accessories (solar inverter, cables and solar batteries, if desired), for instance in a plant room 4. Plan a day for installation 5.
